

WEEDS CONTROL

“A weed” is any plant that grows in an undesired place.

- A weed competes with coffee for resources such as water and nutrients.
- Poor weeding can cause plants to have poor health and low yields.
- Do hand weeding under the coffee drip-line.
- Good agricultural practices like mulching, use of cover crop and shade trees are helpful in controlling weeds

Unweeded coffee farm

Do not dig under coffee drip-line

Mulching and shades kills weeds.

Cover crop controls the weeds

Do hand weeding under drip-line
